Millions of voters still believe the 2020 election was, at the very least, suspicious. The government made sure that election deniers were tagged as insurrectionists, traitors, and conspiracy nuts. That's what totalitarian governments do. The media ignored all indications of fraud and, to this day, use 2020 election statistics as gospel truth. Courts ignored all evidence, not because there was no proof, but because they turned a blind eye. Democrats spun a constant drone about Trump's peril to our democracy, and the Democrats were here to save us.

As the months passed, the year 2020 and the subsequent election took an unusual turn. President Trump was at a high. The border was nearly secure. The wall was being built. The government lifted many business regulations, bringing back industries that had previously left the country. The economy was buzzing along, and energy was cheap. Unemployment was down. Minority home ownership was at the highest level in history. After Trump's tax cuts, federal taxes were at a manageable level. Tariffs protected domestic jobs and technology from foreign competition. Russia, China, Iran, and even North Korea were quiet. The Middle East showed no sign of exploding. Israel and her neighbors began to gather at the table to discuss living in peace and prosperity for everyone. Every Trump rally was filled to capacity with tens of thousands of supporters, while Biden's rallies drew less than 100 people. Biden rarely held a rally.

The mainstream media, which lost its curiosity many years ago, was hard at work, giving Trump negative coverage 94% of the time. It is miraculous that Trump was able to accomplish what he did in such an environment.

The Democrat Party, their deep state, and the globalist oligarchs were in a panic. They already lost several years of 'remaking America' with Hillary Clinton's loss three years earlier. To the Left, Trump had to be stopped.

Then COVID-19 hit. A disease not unlike the flu that came out of nowhere. Early on, it was established that COVID came from China. President Trump immediately ordered a travel ban to and from China, causing the Democrats to waste no time calling Trump a racist. The federal government, in cahoots with the medical establishment, made sure COVID became a dire medical emergency complete with lockdowns, stay-at-home orders, mask and vaccine mandates that they knew were worthless, and in many cases dangerous, but were a good optic. They essentially shut down our economy. Millions of people were now out of work.

We found out that Fauci was working with the Chinese to develop the coronavirus. A question began to appear on the minds of many pundits but no one had the guts to ask. Did the Democrat Party conspire with China to release a pandemic to stop Trump?

Fauci and the medical establishment ordered only certain 'approved' treatments. Rank and file physicians were confused, as they knew what treatments to use but were prevented from using them. When they did prescribe them, doctors were either fired from their positions or disgraced. Millions died.

The 2020 election was a coup, nothing less. Trump had to be stopped, and nothing was held back. The release of a dangerous flu and the ensuing vaccines, the trashing of the economy, the altering of election law with COVID as the excuse, and the coup de grace, Hammer and Scorecard.

As you remember, Hammer and Scorecard is a super surveillance computer designed and built by the CIA after 9/11 to counter foreign terrorist threats. It could surveil people, and with its software, Scorecard, it

could alter elections without detection. The CIA lacks authorization to carry out domestic operations. It is a foreign intelligence service only. Regardless, Obama ordered the CIA to move the computer to Fort Washington, Maryland, for his own domestic use.

It was first used in the 2012 election. Obama was in a tight race. He had to win Florida. With the help of John Brennan, Assistant to the President for Homeland Security, and James Clapper, Director of National Intelligence, and with the use of The Hammer and Scorecard, he did win Florida, a red state.

Obama, illegally, ordered the computer to surveil senators, congressmen, judges, Supreme Court justices, presidential candidates, presidents and their campaigns. It could also alter elections right here at home.

It was used again in 2016, but the overwhelming number of votes for Trump overwhelmed the algorithm set.

2020 was a different story. With the help of cooked election laws and massive mail-in balloting, the use of mules, Hammer and Scorecard did their work. If you remember, half-way through the evening of the voter count, all voting ceased for while Hammer and Scorecard made 'adjustments'.

Trump was ahead in all the battleground states with comfortable margins. Suddenly, for inexplicable reasons, Wisconsin, Michigan, Pennsylvania, North Carolina, and Nevada ceased counting all at the same time. No new reporting for the next three hours. All five states had Democrat governors. During the pause, all five states 'found' enough votes to catch up to Trump with 90% of the votes in. The remaining 10% of the vote was 'given' to Biden. That means, for instance, that nearly 100% of the vote from Wayne County (Detroit) went to Biden. It also means that almost all registered voters in that county voted. Almost a statistical impossibility. It was a similar situation in Madison, Wisconsin, Raleigh, North Carolina, and in Las Vegas. Not one pundit from any news network questioned what had just taken place.

Scorecard uses what's known as a prismatic scoring algorithm. It steals votes at the transfer point, i.e. the administrator at every Secretary of State's computer whose votes are transferred to the vault. The administrator is not conducting this fraud. It is A.I. that is doing the work programmed into it. Scorecard is Artificial Intelligence.

Biden was well aware but couldn't process it since others were in charge. He did say, in October of 2020, "We have put together, I think, the most extensive and inclusive voter fraud organization in the history of American politics." Of course, so-called 'fact-checkers' say we are taking it out of context. Well, we know people with dementia will often say inappropriate things. It doesn't mean it's not true. It's more like a childish truth.

So, the 2020 election is now history. And you can read about it in history books, but don't expect any truth. The truth is now hard to come by. Such are countries that are burgeoning communist/fascist states.

The January 6 protest was just that—a protest to demand an audit of the election, nothing else. The Democrats and the Washington establishment saw fit to 'work' the protest into the appearance of a riot and an insurrection. To show the world the seriousness of their accusations and to further their plans, they imprisoned dozens without trial.

Albert Sensor

Sometime before the 2020 election, the federal establishment decided to show their 'concern' for elections by developing a new cybersecurity scheme called ALBERT SENSOR (AS). It is an intrusion detection system, according to the Cybersecurity and Infrastructure Security Agency (CISA) and the Center for Internet Security (CIS). This new system, as advertised, is supposed to protect election systems nationwide from cyberattacks. CIS is a 501c3 organization performing governmental functions under Federal Acquisition Regulation Subpart 7.5. Only a handful of machines had it installed, and its usage during the 2020 election was extremely limited.

The federal government now had a system that would prevent voter fraud from computerized voting systems. At least that is what they want us to know.

In 2023, articles and reports began to appear claiming that the Albert Sensors were spy software. Once again, both CISA and CIS maintain that the Albert Sensors are indeed cybersecurity software. The commissioner of Lincoln County, Washington, removed the system from their network due to a successful cyberattack and suspicious network activity. The Department of Homeland Security and their governor, Jay Inslee (D), then targeted Lincoln County and its 10,500 residents to re-install the Albert Sensor.

Lincoln County refused to reinstall the AS system. The federal government then ordered the county to return the unit without conducting an inspection. In other words, they would not allow a look under their skirts.

A similar situation was found in Ferry County, WA. The county commissioners voted to remove the sensor from their computer network in 2022. **One expert described AS as "using the language of election integrity to dismantle the infrastructure of election integrity."**

The Center for Internet Security was empowered to operate the national network of Albert Sensor software within 98% of the 3,500 municipal enclaves. Scorecard and Albert Sensor (AS) work together to control elections in this country, and they have now been virtually installed almost everywhere.

Municipalities must sign an MoA (Memorandum of Agreement) a legal contract, for the free system.

The CIS cybersecurity MoA:

1. does not warrant a level of cybersecurity,

2. does not warrant a level of help during an intrusion,

3. does not provide notification of an intrusion,

4. does not provide any help after the intrusion,

5. does not prevent successful cyberattacks.

The CIS DOES prevent any municipality from:

1. measuring any AS process or logging its activity,

2. knowing actual AS operations within the network,

3. knowing or setting AS configuration,

4. Knowing what information is obtained from the municipality and where it is sent.

The municipality is required to provide:

1. an encrypted channel (VPN) between AS and unspecified destinations,

2. a detailed network diagram that is updated with any changes,

3. a detailed list of all the users of the municipalities network.

The reason why there is no warrant for almost everything Albert Sensor does is because the federal government shouldn't be there in the first place. They have no legal right to involve themselves in any elections run by the states.

It is pertinent to note that CIS is not a federal agency and thus is not subject to the Freedom of Information Act. It is also pertinent to note that Albert Sensor software works in concert with HAMMER and SCORECARD.

Now, we have a new system that promises to protect us from election fraud. But instead we have a system that can now control elections from a central location and manipulate results remotely by the federal government. Totally unconstitutional. Not a promising fix.

A team of Trump attorneys is reportedly working to remove AS as we write. We'll stand by impatiently and eagerly observe the application of legal remedies.

The 2024 election was already in great danger of fraud. It is now worse than we thought. Republican claims that they have resolved most 2020 election issues are unfounded. There has been and continues to be a 'resist movement' among Democrats and anti-Trumpers. Americans need to understand that this is not as much a Trump resistance as it is an America First resistance. Those that benefit from war, globalism, climate change nonsense, illegal immigration, the assault on fossil fuel and energy production, the drug trade, the demise of family farming, the destruction of the middle class, and the Judeo-Christian ethic will continue their onslaught. Donald Trump was always correct when he said, "They are not after me, they are after you. I'm just in the way."
